Who. Murdered Africa by **lovely5**(m): 11:58am On Oct 24, 2012

I saw this Theory online and i think i should share it with my brothers and sisters of Africa...OPEN YOUR MIND WHEN READING.

W. H. O. MURDERED AFRICA

There is no question mark after the title of this article because the title is not a question. It's a declarative statement.

WHO, the World Health Organization, murdered Africa with the AIDS virus. That's a provocative statement isn't it?

The answer to this little mystery, Murder on the WHO express, will be quite clear to you by the end of my report. You will also understand why the other suspects, the homosexuals, the gream money and the Haitians, were only pawns in this virocidal attack on the non-Communist world.

If you believe the government propaganda that AIDS is hard to catch then you are going to be even sooner than the rest of us. The common cold is a virus. Have you ever had a cold? How did you get it? You don't really know, do you? If the cold virus were fatal how many people would there be left in the world?

Yellow fever is a virus. You don't find mosquitoes bites. Malaria is a parasite also carried by mosquitoes. It is many times larger than the AIDS virus (like comparing a pinhead to a mouse head), yet the mosquito easily carries this large organism to man.

The tuberculosis germs, also much larger than AIDS virus, can be transmitted by fomites (inanimate objects such as towels). The AIDS virus can live as long as ten days outside the human body. Do you ever sneeze (what I call a mechanical aerosol transmitter)? You better be.

You can't understand this murder mystery and you wouldn't believe my conclusions unless you learn a little virology. I'll make it as painless as possible.

Many viruses grow in animals and many grow in humans but most of the viruses that affect animals don't affect humans. There are exceptions, of course, such as yellow fever and small pox.

There are some viruses in animals that cause very lethal cancer in those animals, but no effect man or other animals. The bovine leukaemia virus (BLV), for example, is lethal to cows but not humans. There is another virus in cats that is deadly to sheep called visna virus which is also non-reactive in man. These deadly viruses are "retro viruses" meaning that they can change the genetic composition of cells that they infect.

The World Health Organization in published articles, called for scientists to work with these deadly agents and attempt to make a hybrid virus that would be deadly to humans. In the bulletin of the World Health Organization WHO, Volume 47, p. 295, 1972, they said, "An attempt should be made to see if viruses can in fact exert selective effects on immune function. The possibility should be looked into that the immune response to the virus itself may be impaired if the infecting virus damages, more or less selectively, the cell responding to the virus."

That's AIDS. What the WHO is saying in plain English is "Let's cook up a virus that selectively destroys the T cell system of man, an acquired immune deficiency."

Why would anyone want to do this? If you destroy the T cell system of man you destroy man. It is even remotely possible that the World Health Organization would want to develop a virus that would wipe out the human race?

If their new viruses creation worked, the WHO stated, then many terrible and fatal infectious viruses could be made even more terrible and more malignant. Does this strike you as being a peculiar goal for a health organization? The thought occurred to me.

Sometimes I believe in conspiracies and sometimes I don't. It depends on the subject. Was there a conspiracy to kill President Kennedy? If you don't think so, then you have a dumb liberal. My attitude toward some alleged conspiracies, the Federal Reserve for instance, depends on what I had for breakfast.

But it doesn't take a bad breakfast to see an amazing concatenation of events involving Russian and Chinese communist nationals, the World Health Organization, the National Cancer Institute and the AIDS pandemic.

But what about the green monkey? Some of the best virologists in the world and many of those directly involved in AIDS research, such as Robert Gallo and Luc Montagnier, have said that the green monkey may be the culprit. You know the story: A green monkey bit a worker in the ass and, bam—AIDS all over central Africa.

There is a fatal flaw here. It is very strange. Because Gallo, Montagnier and those other virologists know that the AIDS virus doesn't occur naturally in monkeys. In fact it doesn't occur naturally in any animal.

AIDS started practically simultaneously in the United States, Haiti, Brazil and Central Africa. (Was the green monkey a jet plane?) Examination of the gene structure of the AIDS virus in man and monkey has potentially possible to isolate this AIDS virus from monkeys to man by natural means.

Because of the artificial nature of the AIDS virus it will not easily transfer from man to man until it has become very concentrated in the body fluids through repeated injections from person to person, such as drug addicts, and through high multiple partner sexuality such as takes place in Africa, among homosexuals and among some American Indians. After repeated transfer it can become a "natural" infection for man, which it has.

Dr. Theodora Steketee's research of the literature indicates that the National Cancer Institute (NCI) in collaboration with the World Health Organization made the AIDS virus in their laboratories at Fort Detrick (now NCI). They combined the deadly retroviruses, bovine leukaemia virus and sheep visna virus, and injected them into human tissue cultures. The result was the AIDS virus, the first human retrovirus known to man and now believed to be 100 percent fatal to those infected.

The momentous plague that we now face was anticipated by the National Academy of Sciences (NAS), in 1974 when they recommended that "Scientists throughout the world join the members of this committee in voluntarily deferring experiments (linking) animal viruses."

What the NAS is saying in carefully guarded English is "For God's sake stop this madness!" Man went over the edge when he started playing God and started genetic engineering viruses in the laboratory.

We've let the green monkey off the hook. How about the communists? In my original monograph on AIDS, before Dr. Steckert alerted me to the scientific absurdities being put forward by the "experts" on AIDS, I said, "After the holocaust has run its course, and we've buried 10 or 20 million young people, who will protect us? If we are faced with an invasion from a Communist Mexico, aided by Communist Nicaragua and Cuba, who will defend the Rio Grande? Wouldn't it be ironic if the godless Marxists were the ones who survived the plague because they were already infected with the virus?"

Dr. Theodora A. Steketee in the cinquecento doctor who unravelled this conundrum, the greatest murder mystery of all time. We should get the Nobel prize but he'll have to split it with me. Dr. Steketee's research doctor ties his fiendish deed to the Fort Detrick lab and the AIDS virus jumps from the 20th floor. There was no evidence of foul play!

Stricker was convicted by a Republican court in a kangaroo appeal for Security Pacific Bank. He was to estimate the cost of the health care for the future. Should they form a health maintenance organization? HMO was a major issue. After investigating the current medical market he advised against the HMO concept. Instead he recommended a roll of paid hospitalization and major medical insurance.

He became fascinated with all the peculiar scientific anomalies concerning AIDS that kept cropping up. Why did the "experts keep talking about green monkeys and homosexuals being the culprits when it was obvious that the AIDS virus was a man-made virus? Why did they say that the homosexuals were getting AIDS because they had lots of sex, when the Haitians, who had even more monkey dick, were only did AIDS when practicing homosexuality in Africa, Haiti, the United States and southern Europe?

Why, when it was proposed to the National Institute of Health that the AIDS virus was a combination of two bovine or sheep viruses cultures in human cells in a laboratory, did they say it was "bad science" when that's exactly what occurred?

As early as 1970 the World Health Organization was planning to develop animal viruses in human tissue cultures. Cedric Mims, in 1987, said in a published article that there was a bovine virus contaminating the culture media of the WHO. Was this an accident or a "non-accident"? I'll let you decide why the WHO continue to use bovine serum.

This is the origin of the green monkey theory. The cyclic vervine was driven on green monkey kidney cells and the geniuses who brought us polio vaccine said: "We get weak virus by growing it in monkey cells." They didn't get weak virus at all but got the AIDS virus. Instead of rapidly disappearing without any medical intervention, 64 million Americans were vaccinated with SV-40 contaminated vaccine in the 60s. An increase in cancer in this population made scientists take a look at the vaccine. Sure enough, SV-40 was found to cause cancer in hamsters and the cancer of AIDS was discovered simultaneously with the African and Haitian epidemics.

The SV-40 virus gave man his most malignant cancer. Monkeys in AIDS patients. Most significantly, during AIDS have received the SV-40 inoculation from polio vaccinations. Primary multifocal leukencephalopathy (PML), brain rot, has been added to the burden of homosexuals and others who had enough to bear having the AIDS virus. Monkeys don't get PML.

The final piece of the puzzle is how AIDS descended the homosexual population in the United States. It wasn't from smallpox vaccination as in Africa because we don't do that in the United States and no vaccination was given to homosexuals.

Although some AIDS has been brought to the United States from Haiti by homosexuals, it can be seen in one of their favourite "gray-growths" It would not be enough to explain the explosion of AIDS that occurred simultaneously with the African and Haitian epidemics.

The AIDS virus didn't exist in the United States before 1978. You can check back in any hospital and no stored blood samples were found anywhere that exhibit the AIDS virus before that date.

What happened in 1978 and beyond to cause AIDS to burst upon the scene and devastate the homosexual segment of our population? It was the introduction of the hepatitis B vaccine which was a new biotechnology of 1978.

A Doctor W. Schmugner, born in Poland and educated in Russia, came to this country in 1965. His immigration to the US was probably the most fateful immigration in our history. He, by investigative journalist Randy Shilts, in the book The Band Played On, was a Russian trained doctor become head of one of the largest blood banks in the world? Doesn't that strike you as peculiar? He set up a ruse for the hepatitis vaccine studies by humans. He knew that AIDS virus was in the vaccine, but was not responsible, would be allowed to participate in this study. Can you think of any reason, other than the desire to spread something among the population, for insisting that all homosexuals participate in the hepatitis vaccine studies? Was the homosexual conspiracy theory but gone the some other logical explanation. Schmugner had and his diabolical secret went with him.

The hepatitis vaccine, unlike the AIDS vaccine, was not grown from human tissue culture. So accidental contamination didn't occur. The AIDS virus was probably put in the vaccine deliberately. It was no mistake. The Centre for Disease Control reported in 1981 that four homosexuals who had received hepatitis vaccinations developed AIDS. Schmugner, who had immigrated to the US because of his hate for Russia, got all because they don't want to admit that 100 percent of hepatitis vaccine receivers are infected with AIDS.

Where is the data on the hepatitis vaccine studies? FDA? CDC? No, the US Department of Justice has it buried where you will never see it.

I have always said, and our forefathers told us this, that the greatest threat to the people is always government. Not foreign governments, but our own government. What has the government told about vaccines?

* It is a homosexual disease—homosexuals certainly spread it but the primary responsibility wasn't theirs.
* It's related to anal intercourse only—wrong.
* It is a disease of Africans—Africans were targets for AIDS would get the disease—wrong.
* It came from the African green monkey—wrong.
* It came from the cytomegalovirus—wrong.
* It was due to popping poppers (nitrate inhalants)—wrong.
* It was started 400 years ago by the Portuguese—wrong. (It started in 1972).
* You can't get it by heterosexual intercourse—wrong.
* The virus can't live outside the body—wrong.

The head of the Human Laboratory Research Group at Harvard is a veterinarian. Dr. Judd, International Agency for Research on Cancer, the agency that requested the production of the virus in the first place, is also a veterinarian. The leukaemia research he is conducting is being done under the auspices of the National Institutes of Health.

Now there is nothing wrong with being a vet but, as we have pointed out, the AIDS virus is a human virus. You can't test these viruses in animals and you can't test leukaemia viruses in humans. Why are they using veterinary medicine. Would it not be more appropriate to use human cells in one half million dollars to study leukaemia in a veterinarian college? As long as we are being used as experimental animals maybe it's appropriate.

The London Times should be congratulated for uncovering the smallpox/AIDS connection. But their expose was very misleading. The article states that the African AIDS epidemic was caused by the vaccination campaign. Nonsense! AIDS in Africa existed.

Dr. Robert Gallo, who has been mixed up in some very strange scientific snafus, supports this theory. Whether the infection of 75 million Africans was deliberate or accidental can be debated but there is no room for debate about whether the smallpox shots "awakened the unsuspected virus infection." There is absolutely no scientific evidence in the laboratory experiment or eva was present in the entire West Africa they descended upon these hapless people in 1977 with their deadly AIDS-laced vaccine. The AIDS virus didn't come from Africa. It came from Fort Detrick and the CDC.

The situation is extremely desperate and the medical profession is too frightened and cowed (as usual) to do anything about it. Science attempted to mobilize the doctors through some of the most respected medical journals in the world. The prestigious Annals of Internal Medicine said that his material "appears to be entirely concerned with matters of virology" and so try some other publication.

In his letter to the British publication Nature Dr. Steketee said, "If current human experimental procedures had been followed we would not find half of the world stumbling off at the wrong path to the cure for AIDS with the other half of the world covering up the origination of the damned disease. It appears to me that group Africans of internal medicine is participating in the greatest fraud ever perpetrated."

I guess they didn't like that so Strecker submitted his sensational and mind-boggling letter with all of the proper documentation to the British Journal.

Their reply: "Thank you for the interesting letter on AIDS. I am sorry to have to report that we will not be able to publish it. We have no criticism" but their letter was "overcrowded with submissions." They're too crowded to announce the end of western civilization and possibly of mankind? I don't think so hereafter.

I share

Re: Who. Murdered Africa by **Callisto1**: 12:44pm On Oct 24, 2012

AIDS na ... Cancer is worse than AIDS
Na wah for 'God' of geniuses oh 😀
As for what I like...? :/

Wickedness and CORRUPTION!!! 😀

What the NAS is saying in carefully guarded English is "For God's sake stop this madness!" Man went over the edge when he started playing God and started genetic engineering viruses in the laboratory.

We've let the green monkey off the hook. How about the communists? In my original monograph on AIDS, before Dr. Steckert alerted me to the scientific absurdities being put forward by the "experts" on AIDS, I said, "After the holocaust has run its course, and we've buried 10 or 20 million young people, who will protect us? If we are faced with an invasion from a Communist Mexico, aided by Communist Nicaragua and Cuba, who will defend the Rio Grande? Wouldn't it be ironic if the godless Marxists were the ones who survived the plague because they were already infected with the Victorian attitude toward sex and their severe repression of homosexuality, escaped most of the ravages of the AIDS epidemic and took over by simply walking across the border?"

I wouldn't change a word of that. But it was based on my natural paranoia toward the Communists, having observed the way they operate for 40 years. Recently, in an article by Cedric Mims in 1987, he said that the AIDS virus was a combination of two bovine or sheep viruses cultures in human cells in a laboratory, did they say it was "bad science" when that's exactly what occurred?

As early as 1970 the World Health Organization was planning to develop animal viruses in human tissue cultures. Cedric Mims, in 1987, said in a published article that there was a bovine virus contaminating the culture media of the WHO. Was this an accident or a "non-accident"?
